## MANUFACTURING AND TRADE INVENTORIES AND SALES October 2013

Economic Indicator Webinar Series: To learn more about the economic indicators the U.S. Census Bureau publishes, join us for the Economic Indicator Webinar Series. For more information go to www.census.gov/econ/webinar.

Sales. The U.S. Census Bureau announced today that the combined value of distributive trade sales and manufacturers' shipments for October, adjusted for seasonal and trading-day differences but not for price changes, was estimated at $\$ 1,307.3$ billion, up 0.5 percent $( \pm 0.2)$ from September 2013 , and were up 3.9 percent ( $\pm 1.1$ ) from October 2012.

Inventories. Manufacturers' and trade inventories, adjusted for seasonal variations but not for price changes, were estimated at an end-of-month level of $\$ 1,691.1$ billion, up 0.7 percent ( $\pm 0.1$ ) from September 2013 and up 3.6 percent ( $\pm 1.5$ ) from October 2012.

Inventories/Sales Ratio. The total business inventories/sales ratio based on seasonally adjusted data at the end of October was 1.29. The October 2012 ratio was 1.30.

The scheduled release dates for 2014 are as follows: January 14, February 13, March 13, April 14, May 13, June 12, July 15, August 13, September 12, October 15, November 14, December 11.

Total Business Inventories/Sales Ratios: 2004 to 2013
(Data adjusted for seasonal, holiday and trading-day differences but not for price changes)

The Manufacturing and Trade Inventories and Sales Report for November 2013 is scheduled to be released January 14, 2014 at 10:00 a.m. EST.

For customized time series estimates by industry, visit the Census Bureau's web site at <www.census.gov/timeseries>.
To receive the latest updates on the nation's key economic indicators, download the America's Economy app for Apple and Android smartphones and tablets.

For additional survey information, visit <www.census.gov/mtis>.

* The 90 percent confidence interval includes zero. The Census Bureau does not have sufficient statistical evidence to conclude that the actual change is different from zero.

(p) Preliminary estimate.
(r) Revised estimate.
${ }^{1}$ Inventories are on a non-LIFO basis as of the end of the month.
${ }^{2}$ Adjusted for seasonal variations and, in the case of sales, for trading-day differences and holiday variations. Concurrent seasonal adjustment is being used to adjust all sales, shipment and inventory estimates. Concurrent seasonal adjustment uses all available unadjusted estimates as input to the X-13ARIMA-SEATS program. The factors derived from the program are applied to the current and previous month estimates and for retail and wholesale estimates a year ago as well. For retail sales, concurrent seasonal adjustment is also used to adjust the advance estimates (published one month before the preliminary estimates) and the estimates one year before the advance month. This explains the revision to retail estimates from a year ago.
${ }^{3}$ Manufacturers sales refer to the value of shipments by manufacturers. The shipments data from individual manufacturers are adjusted prior to tabulation for the number of trading days as well as for any variations in the length of the reporting period.
${ }^{4}$ The 2007 North American Industry Classification System (NAICS) defines merchant wholesalers as including manufacturers’ sales branches and offices. However, the estimates included in this release exclude manufacturers' sales branches and offices. Note that this is not a change in coverage from prior releases and is consistent with the description used in the Monthly Wholesale Trade Survey data products.

Note: U.S. and group totals include kinds of business not shown. The Manufacturing and Trade Inventory and Sales estimates are based on data from three surveys: the Monthly Retail Trade Survey, the Monthly Wholesale Trade Survey, and the Manufacturers' Shipments, Inventories, and Orders Survey. The sampling variability for retailers and merchant wholesalers can be used to construct a 90 percent confidence interval for the estimates. Over all possible samples, 90 percent of such intervals will cover the true estimate. These intervals are given in parentheses for the estimates on the front page. If, for example, the estimate is up 0.8 percent and the margin of sampling error is $\pm 1.2$ percent, the 90 percent confidence interval is -0.4 percent to +2.0 percent. If the range contains 0 , it is uncertain whether there was an increase or decrease. Measures of reliability for Retail and Wholesale sales and inventory levels and changes are included in the detailed monthly press releases for those Industries. Manufacturers do not contribute to estimates of sampling variability because the manufacturer's mail panel is not a probability sample from a known frame and standard errors of the industry estimates cannot be calculated. Estimates from all three surveys are also subject to nonsampling errors, which can arise in any stage of the survey. Such errors include coverage error (failure to accurately represent all population units in the sample) response errors, coding errors, and nonresponse. Although no direct measurement of these errors has been obtained, precautionary steps were taken in all phases of the collection, processing, and tabulation of the data to minimize their influence.
